

PUBLIC POLL FINDINGS AND METHODOLOGY

Reuters/Ipsos Poll: January 6th Committee Hearings

Topline Findings

Washington, DC, July 21, 2022 – These are the findings of an Ipsos poll conducted between July 20-21, 2022. For this survey, a sample of 1,005 adults age 18+ from the continental U.S., Alaska, and Hawaii was interviewed online in English. The poll has a credibility interval of plus or minus 3.8 percentage points for all respondents.

For complete results, please refer to the following annotated questionnaire:

NOTE: * = less than 0.5%, - = no respondents

Full Annotated Questionnaire

TM4. Would you say you are generally favorable or unfavorable towards these public figures?

Liz Cheney

	Total July 2022 (N=1,005)	Democrat July 2022 (N=433)	Republican July 2022 (N=375)	Independent July 2022 (N=137)

PUBLIC POLL FINDINGS AND METHODOLOGY

About the Study

These are some of the findings of an Ipsos poll conducted between July 20-21, 2022 on behalf of Thomson Reuters. For this survey, a sample of 1,005 adults age 18+ from the continental U.S., Alaska, and Hawaii was interviewed online in English.

The sample was randomly drawn from [Ipsos' online panel](#), partner online panel sources, and "[river](#)" [sampling](#) and does not rely on a population frame in the traditional sense. Ipsos uses fixed sample targets, unique to each study, in drawing a sample. After a sample has been obtained from the Ipsos panel, Ipsos calibrates respondent characteristics to be representative of the U.S. Population using standard procedures such as raking-ratio adjustments. The source of these population targets is U.S. Census 2019 American Community Survey data. The sample drawn for this study reflects fixed sample targets on demographics. Posthoc weights were made to the population characteristics on gender, age, race/ethnicity, region, and education.

Statistical margins of error are not applicable to online non-probability polls. All sample surveys and polls may be subject to other sources of error, including but not limited to coverage error and measurement error. Where figures do not sum to 100, this is due to the effects of rounding. The precision of Ipsos online polls is measured using a credibility interval. In this case, the poll has a credibility interval of plus or minus 3.8 percentage points for all respondents. Ipsos calculates a design effect (DEFF) for each study based on the variation of the weights, following the formula of Kish (1965). This study had a credibility interval adjusted for design effect of the following (n=1,005, DEFF=1.5, adjusted Confidence Interval=+/- 5.3 percentage points).
