Table 70

Q210P. Adult social care is currently facing major staff shortages. Social care workers are paid less than most other UK workers on average. You will now see some actions that could be taken to increase pay for care workers. These would require an increase in funding for social care, which may lead to higher taxes, or mean that individuals have to pay more for the social care they need.

To what extent do you support or oppose each of the following measures...?

-SUMMARY TABLE
Base: All respondents

	Stronger enforcement of the national living wage for all UK social care workers, e.g. higher fines for employers who underpay social care workers	Increasing the national living wage for all UK workers not just social care workers	Giving social care workers bonus payments, e.g. to incentivise them to stay in their positions during the winter season	Setting a minimum pay rate for social care workers above the national living wage	Establishing a social care pay scale that sets pay rates for different social care workers based on their roles, skills, and experience

Q210P. Adult social care is currently facing major staff shortages. Social care workers are paid less than most other UK workers on average. You will now see some actions that could be taken to increase pay for care workers. These would require an increase in funding for social care, which may lead to higher taxes, or mean that individuals have to pay more for the social care they need.

To what extent do you support or oppose each of the following measures...?

-Stronger enforcement of the national living wage for all UK social care workers, e.g. higher fines for employers who underpay social care workers

Table 52

Q210P. Adult social care is currently facing major staff shortages. Social care workers are paid less than most other UK workers on average. You will now see some actions that could be taken to increase pay for care workers. These would require an increase in funding for social care, which may lead to higher taxes, or mean that individuals have to pay more for the social care they need.

To what extent do you support or oppose each of the following measures...?

-Stronger enforcement of the national living wage for all UK social care workers, e.g. higher fines for employers who underpay social care workers

Base: All respondents

Table 91

Q210P. Adult social care is currently facing major staff shortages. Social care workers are paid less than most other UK workers on average. You will now see some actions that could be taken to increase pay for care workers. These would require an increase in funding for social care, which may lead to higher taxes, or mean that individuals have to pay more for the social care they need.

To what extent do you support or oppose each of the following measures...?

-Giving social care workers bonus payments, e.g. to incentivise them to stay in their positions during the winter season

Base: All respondents

Table 97

Q210P. Adult social care is currently facing major staff shortages. Social care workers are paid less than most other UK workers on average. You will now see some actions that could be taken to increase pay for care workers. These would require an increase in funding for social care, which may lead to higher taxes, or mean that individuals have to pay more for the social care they need.

**To what extent do you support or oppose each of the following measures...?
-Setting a minimum pay rate for social care workers above the national living wage**

Base: All respondents

Table 105

Q210P. Adult social care is currently facing major staff shortages. Social care workers are paid less than most other UK workers on average. You will now see some actions that could be taken to increase pay for care workers. These would require an increase in funding for social care, which may lead to higher taxes, or mean that individuals have to pay more for the social care they need.

To what extent do you support or oppose each of the following measures...?

-Establishing a social care pay scale that sets pay rates for different social care workers based on their roles, skills, and experience

Table 107

Q210Q. Currently in England, social care is means-tested. Adults with more than £23,250 in assets pay for the full cost of their social care needs themselves. There is no limit on how high this cost could be. Assets are things like the value of their house and how much money they have in the bank. As well as the current system, there are several options for splitting the cost between the individual and government. How fair or unfair do you think the following approaches to funding social care are?
-SUMMARY TABLE

Base: All respondents in England only

	Current means-tested system where adults with assets over £23,250 pay for all their social care themselves. No lifetime limit	A means-tested system where adults with assets over £23,250 pay for their social care themselves, with £85,000 lifetime limit	Everyone entitled to some basic social care services, but the individual may have to pay for a wider range of care and support, which is means-tested	A system like the NHS where a wide range of social care services are free at the point of use for all those who need them

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

Table 110

Q210Q. Currently in England, social care is means-tested. Adults with more than £23,250 in assets pay for the full cost of their social care needs themselves. There is no limit on how high this cost could be. Assets are things like the value of their house and how much money they have in the bank. As well as the current system, there are several options for splitting the cost between the individual and government. How fair or unfair do you think the following approaches to funding social care are?
-The current means-tested system where adults with assets over £23,250 pay for all their social care themselves.
There is no limit to how much someone might pay over their lifetime
 Base: All respondents in England only

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

Table 118

Q210Q. Currently in England, social care is means-tested. Adults with more than £23,250 in assets pay for the full cost of their social care needs themselves. There is no limit on how high this cost could be. Assets are things like the value of their house and how much money they have in the bank. As well as the current system, there are several options for splitting the cost between the individual and government. How fair or unfair do you think the following approaches to funding social care are?
-A means-tested system where adults with assets over £23,250 pay for their social care themselves, but with a cap to limit the amount someone would pay over their lifetime to £86,000
 Base: All respondents in England only

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

Table 122

Q210Q. Currently in England, social care is means-tested. Adults with more than £23,250 in assets pay for the full cost of their social care needs themselves. There is no limit on how high this cost could be. Assets are things like the value of their house and how much money they have in the bank. As well as the current system, there are several options for splitting the cost between the individual and government. How fair or unfair do you think the following approaches to funding social care are?
-A system where everyone is entitled to some basic social care services regardless of their assets (i.e. not means-tested) but the individual may have to pay for a wider range of care and support, which is means-tested
 Base: All respondents in England only

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

Table 127

Q210Q. Currently in England, social care is means-tested. Adults with more than £23,250 in assets pay for the full cost of their social care needs themselves. There is no limit on how high this cost could be. Assets are things like the value of their house and how much money they have in the bank. As well as the current system, there are several options for splitting the cost between the individual and government. How fair or unfair do you think the following approaches to funding social care are?
-A system like the NHS where a wide range of social care services are free at the point of use for all those who need them

During fieldwork, 1,204 panellists completed the survey with the incorrect version of a question (i.e., an answer option in question Q210Q read 'Somewhat fair' rather than 'Somewhat unfair'). These participants were reinvited to complete the corrected version of the question. A total of 1,077 (90% of the affected sample who had completed the entire survey) re-took the correction survey within the fieldwork period. This data replaced the data in the original survey and the data from the remaining 127 respondents who did not complete the correction survey was coded as 'Did not answer'.

Table 131

Q210Q. Currently in England, social care is means-tested. Adults with more than £23,250 in assets pay for the full cost of their social care needs themselves. There is no limit on how high this cost could be. Assets are things like the value of their house and how much money they have in the bank. As well as the current system, there are several options for splitting the cost between the individual and government. How fair or unfair do you think the following approaches to funding social care are?
-A system like the NHS where a wide range of social care services are free at the point of use for all those who need them

Q226D. Many experts argue that it is becoming more expensive to fund the NHS because of increasing costs of treatments, an ageing population and several other factors. This means that even in order to maintain the current level of care and services provided for free by the NHS, spending on the NHS would have to increase. With that in mind, which, if any, of the following would you most like to see?

Q226D. Many experts argue that it is becoming more expensive to fund the NHS because of increasing costs of treatments, an ageing population and several other factors. This means that even in order to maintain the current level of care and services provided for free by the NHS, spending on the NHS would have to increase. With that in mind, which, if any, of the following would you most like to see?

Base: All respondents

Q221C. The age at which people can legally buy cigarettes, tobacco or cigarette papers is 18 years old. The government is proposing to raise the legal age by one year, every year, and will continue to do so until no one in future generations is legally allowed to buy such products. This would mean that no one aged 14 years old or younger today would ever be able to legally buy cigarettes, tobacco or cigarette papers. To what extent do you support or oppose this measure?
